15

A system and method for enabling users to send and receive messages and other information from mobile devices and enabling users to access server-based information using mobile devices over wireless data networks are disclosed. The present invention provides a system and method for enabling users to access forms for displaying information on a wireless device, such as a mobile phone, interactive pager, PDA or other wireless device, via a wireless service provider. The forms of the present invention may facilitate a user's ability to retrieve, view and send various types of information from a wireless client device. Different types of forms may include facsimile, memorandum, invitation, user profile and other applications. Forms for each application may include predetermined form fields that are specific to each application. Forms may be created, modified and forwarded (or sent) to one or

more selected recipients. Other operations may also be performed.
